

Using the Content Delivery API documentation

1. Go to the [Get Entries section of the Content Delivery Documentation](#)
2. Select the Get all Entries link to open the query window on the right
3. Update the parameters to use the following:
 - content_type_uid: blog_post
 - environment: preview (or development)
 - locale: en-us
 - api_key: (found in the settings / tokens / content delivery token settings page)
 - access_token: (found in the settings / tokens / content delivery token settings page)

[If you have questions, see the Postman guide for more details](#)

4. Execute the request with the 'Try' button
5. Congrats! you just queried the Contentstack Content Delivery API!
