

Using the Postman collection to connect with the Content Delivery API

1. [Download and install Postman](#)
2. [Download the Contentstack Postman Content Delivery collection](#)
3. To obtain the Content Delivery Token, follow these steps in Contentstack: navigate to the "Settings" page, select "Tokens," then choose "Content Delivery." If you haven't created a Delivery Token yet, [create a new Delivery Token](#). [Additional information about tokens, including Delivery Tokens, can be found in our documentation](#)
4. Open Postman and select the 'Content Delivery API - Contentstack' collection. Entries, Get all entries
5. Edit the Postman variables and update the values for api_key and access_token. The api_key is found on the Delivery Token settings page. The access_token is the Delivery Token. These are used in the Headers of the request.
Also, add the value of the content_type_uid as 'blog_post', environment as 'preview' and locale as 'en-us'.
6. Send the request. Contentstack replies with the JSON of all blog_post entries.
